Transmission	Reporting
Diagnosis/Treatment	Resources

**Definition**

Tuberculosis (TB) is an infectious disease caused by a bacterium, *Mycobacterium Tuberculosis*, which usually affects the lungs. However, other parts of the body can also be affected. Not everyone infected with TB gets sick. As a result, there are two TB-related conditions: Latent TB Infection (LTBI) and active TB disease.

**Signs and Symptoms**

TB disease can cause infection in the lung (pulmonary), which is considered infectious to others. TB disease can also occur outside of the lung (extra pulmonary), which is not as infectious. For active, pulmonary TB disease, general symptoms may include feeling weak or sick, weight loss, fever, night sweats, and a cough lasting three or more weeks. Persons with TB of the lung may have complaints of cough, chest pain, and/or coughing up blood. Other symptoms depend on the particular part of the body that is affected. Any open draining wound should be clinically evaluated.

**Transmission**

TB is spread through the air from one person to another. The TB bacteria become airborne when a person with TB disease of the lungs or throat coughs, sneezes, speaks, or sings. People nearby may breathe in these bacteria and become infected.

**Diagnosis**

Tuberculosis is diagnosed by clinical symptoms, medical history, and laboratory and radiology tests.

**Treatment Recommendations**

- Symptomatic students and staff should be referred to their primary care providers for treatment.
- Any open draining wound should be evaluated by PCP.

**Role of the School Nurse**

**Education**

- Provide information resources to staff, students and families during suspected outbreak (exposure) with Maine CDC.
- Communication is important, but confidentiality must be maintained at the local level.

**Reporting Requirements**

- Confirmed or presumptive active Tuberculosis is reportable by telephone to Maine CDC immediately upon suspicion. 1-800-821-5821
- During a school related outbreak (exposure), the school nurse will work as liaison between school and Maine CDC TB Control program.

**Exclusions**

- School students and staff diagnosed with active Tuberculosis should be excluded *only* during infectious period as determined by the provider.
- Exclusion is not necessary for individuals with Latent TB Infection (LTBI) or non-infectious TB.
